

## Roof Access Safety Considerations

Extreme weather events, uncontrolled organic growth and windblown debris can lead to roof and gutter maintenance issues and cause leaks over time.

If kept clean most roofs and gutters are very robust and can maintain their street appeal and structural integrity for decades.

The Lindab Ladder Bracket is a colour coated product that can be permanently mounted on to the gutter at the safest access point.

Temporary roof access to multi-level properties is particularly dangerous. The permanently fixed Lindab Ladder Bracket will prevent a ladder from sliding, when Operators are accessing the roof to undertake responsive or programmed maintenance work.

In the following photos the Lindab Ladder Bracket has been modelled in white so that it contrasts with the black gutter.
